

USER STORIES

Project: Retail Order Management & Refund Process Improvement

Document: User Stories

Version: 1.0

A. PURPOSE

User stories describe the key requirements from the perspective of the people who will use the proposed solution.

They help translate business requirements into clear, user-focused needs.

B. USER STORIES

ID	User Story	Priority
US-01	As an Operations User , I want to view all orders and their current status so that I can identify orders requiring action.	High
US-02	As an Operations User , I want to filter orders by date and status so that I can focus on specific transactions.	High
US-03	As a Warehouse User , I want to view shipment status so that I can identify delayed deliveries.	Medium
US-04	As a Customer Support User , I want to view return information linked to an order so that I can respond to customer requests accurately.	High
US-05	As a Finance User , I want to view refund status so that I can identify pending refunds.	High
US-06	As a Finance User , I want to view refund amounts and processing dates so that I can monitor refund performance.	High
US-07	As a Manager , I want to view key operational KPIs so that I can understand overall business performance.	High
US-08	As a Manager , I want to view order, return, and refund trends so that I can identify changes in performance.	Medium
US-09	As an Operations User , I want delayed and pending transactions to be clearly identified so that issues can be addressed quickly.	High

ID	User Story	Priority
US-10	As a Business User , I want consistent KPI definitions so that different teams use the same performance measures.	High

C. ACCEPTANCE CRITERIA SUMMARY

Each user story should be considered complete when the following conditions are met:

- Required information is available to the relevant user.
 - Filters return the expected records.
 - Order, return, and refund information is correctly linked.
 - KPIs calculate using the agreed definitions.
 - Exceptions such as delayed orders and pending refunds are identifiable.
 - Dashboard results are understandable to non-technical users.
-

D. REQUIREMENT PRIORITY

Requirements are prioritized using three levels:

High

Required for the core solution and business operations.

Medium

Important for analysis and improved visibility but not essential to the basic workflow.

Low

Potential future enhancements that are outside the initial solution scope.

E. USER STORY FORMAT

All stories follow the standard structure:

As a [user], I want [requirement], so that [business value].

This keeps the requirements focused on both the user's need and the reason the functionality is required.

F. BUSINESS VALUE

The user stories ensure that the proposed solution remains focused on actual business needs rather than unnecessary features.

The main objective is:

USER NEED → FUNCTIONALITY → BUSINESS VALUE
