

# REQUIREMENTS TRACEABILITY MATRIX

**Project:** Retail Order Management & Refund Process Improvement

**Document:** Requirements Traceability Matrix

**Version:** 1.0

## A. PURPOSE

The Requirements Traceability Matrix (RTM) ensures that each major business requirement can be traced through the project from the original business need to its functional requirement, user story, and acceptance criteria.

## B. REQUIREMENT TRACEABILITY

| Business Requirement            | FRS          | User Story | Acceptance Criteria | Status  |
|---------------------------------|--------------|------------|---------------------|---------|
| Improve order visibility        | FR-01        | US-01      | AC-01               | Planned |
| Enable order filtering          | FR-06        | US-02      | AC-02               | Planned |
| Improve shipment visibility     | FR-02        | US-03      | AC-03               | Planned |
| Improve return tracking         | FR-03        | US-04      | AC-04               | Planned |
| Improve refund visibility       | FR-04        | US-05      | AC-05               | Planned |
| Monitor refund details          | FR-04        | US-06      | AC-06               | Planned |
| Provide management KPIs         | FR-07        | US-07      | AC-07               | Planned |
| Provide trend analysis          | FR-08        | US-08      | AC-08               | Planned |
| Identify operational exceptions | FR-09        | US-09      | AC-09               | Planned |
| Standardize KPI definitions     | FR-07, FR-10 | US-10      | AC-10               | Planned |

### **C. TRACEABILITY FLOW**

Each requirement follows this path:

**Business Need**

↓

**Functional Requirement**

↓

**User Story**

↓

**Acceptance Criteria**

↓

**Testing / Validation**

This ensures that a requirement introduced at the business level is not lost during solution development.

---

### **D. COVERAGE CHECK**

The current requirements cover the major business areas:

- Order Management
  - Shipment Tracking
  - Return Management
  - Refund Management
  - KPI Reporting
  - Trend Analysis
  - Exception Reporting
  - Management Visibility
-

## E. CHANGE CONTROL

Any change to a requirement should be reviewed for its impact on:

- Business requirements
- Functional requirements
- User stories
- Acceptance criteria
- Dataset
- Dashboard
- UAT test cases

The RTM should be updated whenever an approved requirement is added, removed, or changed.

---

## F. PROJECT STATUS

All requirements are currently **Planned**.

Implementation status will be updated as the dataset, SQL analysis, dashboard, and testing components are developed.
