

ACCEPTANCE CRITERIA

Project: Retail Order Management & Refund Process Improvement

Document: Acceptance Criteria

Version: 1.0

A. PURPOSE

Acceptance criteria define the conditions that must be satisfied for a requirement to be considered complete and acceptable to the business.

B. ACCEPTANCE CRITERIA

ID	Requirement	Acceptance Criteria
AC-01	Order Tracking	User can view Order ID, customer, date, amount, and current order status.
AC-02	Order Filtering	User can filter orders by date and order status and receive the correct records.
AC-03	Shipment Tracking	User can identify dispatched, delivered, and delayed shipments.
AC-04	Return Tracking	User can view return details linked to the correct Order ID.
AC-05	Refund Tracking	User can identify pending and completed refunds.
AC-06	Refund Details	User can view refund amount and processing date for applicable transactions.
AC-07	KPI Dashboard	Dashboard correctly displays agreed KPIs such as orders, returns, and refunds.
AC-08	Trend Analysis	User can view order, return, and refund trends over time.
AC-09	Exception Reporting	Delayed orders, pending returns, and pending refunds are clearly identifiable.

ID	Requirement	Acceptance Criteria
AC-10	KPI Consistency	KPI calculations use the definitions agreed in the project requirements.

C. DATA VALIDATION CRITERIA

The solution must ensure that:

- Order IDs are valid and unique.
 - Required fields are not blank.
 - Returns reference valid orders.
 - Refunds reference valid orders or returns.
 - Dates follow the correct business sequence.
 - Refund amounts are not negative.
 - Status values follow the defined business statuses.
-

D. DASHBOARD ACCEPTANCE

The dashboard will be accepted when:

- KPIs display the correct values.
 - Filters affect the relevant visuals correctly.
 - Users can identify operational exceptions.
 - Order, return, and refund information is consistent.
 - The dashboard can be understood without technical knowledge.
-

E. BUSINESS ACCEPTANCE

The overall solution will be considered acceptable when it provides:

Centralized visibility → Consistent reporting → Exception identification → Actionable business information

The solution must address the major gaps identified in the Gap Analysis and satisfy the relevant requirements documented in the FRS.
