

FUNCTIONAL REQUIREMENTS SPECIFICATION (FRS)

Project: Retail Order Management & Refund Process Improvement

Document: Functional Requirements Specification

Version: 1.0

A. PURPOSE

This document converts the business requirements identified in the BRD into clear, testable system requirements.

The FRS defines what the proposed reporting solution should allow users to do, what information it should provide, and how the system should behave.

B. SOLUTION OVERVIEW

The proposed solution provides a centralized reporting and dashboard layer for the retail order lifecycle.

Order → Shipment → Delivery → Return → Refund → Reporting

The solution will consolidate operational information and provide users with a consistent view of order and refund performance.

C. USER ROLES

User	Primary Requirement
Operations	Monitor and update order status
Warehouse	Track shipments and returned products
Customer Support	Record and monitor return requests
Finance	Track refund processing
Management	Monitor KPIs and overall performance

D. FUNCTIONAL REQUIREMENTS

FR-01: Order Tracking

The system shall allow users to view order information including:

- Order ID
- Customer ID
- Order Date
- Product
- Order Status
- Delivery Status

Users should be able to identify pending, completed, and delayed orders.

FR-02: Shipment Tracking

The system shall provide visibility into shipment progress.

Users shall be able to identify:

- Pending shipments
 - Dispatched orders
 - Delivered orders
 - Delayed shipments
-

FR-03: Return Management

The system shall allow users to monitor customer return requests.

Return information should include:

- Return ID
 - Order ID
 - Return Date
 - Return Reason
 - Return Status
-

FR-04: Refund Tracking

The system shall provide visibility into refund processing.

Refund information should include:

- Refund ID
- Order ID
- Refund Amount
- Refund Date
- Refund Status

Users shall be able to identify pending and completed refunds.

FR-05: Order Search

Users shall be able to locate individual transactions using identifiers such as:

- Order ID
 - Customer ID
 - Return ID
 - Refund ID
-

FR-06: Dashboard Filters

The dashboard shall allow users to filter information by relevant business dimensions, including:

- Date
- Order Status
- Return Status
- Refund Status
- Department

Filters shall update the displayed KPIs and charts accordingly.

FR-07: KPI Dashboard

The solution shall display key operational metrics including:

- Total Orders
- Pending Orders
- Delivered Orders
- Return Rate
- Refund Rate
- Pending Refunds
- Average Processing Time

KPIs should be presented in a simple format suitable for management review.

FR-08: Trend Analysis

The dashboard shall provide time-based views of operational performance.

Users should be able to identify trends such as:

- Order volume over time
 - Returns over time
 - Refund volume over time
 - Changes in processing time
-

FR-09: Exception Identification

The solution shall help users identify operational exceptions, such as:

- Delayed orders
- Pending shipments
- Long-pending returns
- Delayed refunds

These exceptions should be clearly distinguishable in the dashboard.

FR-10: Reporting

The solution shall provide operational reports for relevant business teams.

Reports should support monitoring of:

- Order performance
 - Returns
 - Refunds
 - Processing times
 - Exceptions
-

E. BUSINESS RULES

ID	Business Rule
-----------	----------------------

BR-01	Every order must have a unique Order ID.
-------	--

BR-02	A refund should only be processed for an eligible return.
-------	---

BR-03	Refund status must clearly identify pending and completed refunds.
-------	--

BR-04	Refund amount cannot be negative.
-------	-----------------------------------

BR-05	Return information must be linked to the relevant Order ID.
-------	---

BR-06	Order status should reflect the latest available operational status.
-------	--

BR-07	KPI calculations must use validated reporting data.
-------	---

F. DATA REQUIREMENTS

The reporting solution should contain the following core information:

Order Data

- Order ID
- Customer ID
- Order Date
- Product
- Order Status

Shipment Data

- Order ID
- Shipment Date
- Delivery Date
- Shipment Status

Return Data

- Return ID
- Order ID
- Return Date
- Return Reason
- Return Status

Refund Data

- Refund ID
- Order ID
- Refund Amount
- Refund Date
- Refund Status

G. VALIDATION REQUIREMENTS

The system should validate key data before it is used for reporting.

Examples:

- Order ID must not be blank.
- Order ID should be unique.
- Refund amount must be greater than or equal to zero.
- Return Date should not occur before Order Date.
- Refund Date should not occur before Return Date.
- Required status fields must contain valid values.

Invalid or incomplete records should be flagged for correction.

H. DASHBOARD REQUIREMENTS

Management View

The management dashboard should provide a high-level summary of:

- Order Volume
- Pending Orders
- Return Rate
- Refund Rate
- Pending Refunds
- Processing Time

Operational View

Operational users should be able to investigate:

- Pending orders
- Shipment delays
- Returns
- Refund exceptions

The dashboard should prioritize clarity over the number of visuals.

I. NON-FUNCTIONAL REQUIREMENTS

Area	Requirement
Usability	Dashboard should be simple and easy to understand.
Performance	Reports should load within a reasonable time.
Accuracy	KPI calculations must use validated data.
Security	Access should be appropriate to the user's role.
Maintainability	Reporting logic should be easy to update.
Scalability	Solution should support increasing transaction volumes.

J. ACCEPTANCE CRITERIA

The solution will be considered acceptable when:

- Users can view order information from a centralized report.
 - Users can identify pending and delayed orders.
 - Returns can be linked to the relevant orders.
 - Pending and completed refunds can be identified.
 - Key KPIs are calculated and displayed correctly.
 - Dashboard filters work correctly.
 - Users can investigate operational exceptions.
 - Business users can understand the dashboard without technical knowledge.
-

K. REQUIREMENT TRACEABILITY

The functional requirements directly support the business objectives identified in the BRD.

Business Need	Related Requirements
Improve order visibility	FR-01, FR-02
Improve return tracking	FR-03
Improve refund visibility	FR-04
Reduce manual investigation	FR-05, FR-06
Improve management reporting	FR-07, FR-08
Identify operational problems	FR-09
Standardize reporting	FR-10

L. OUT OF SCOPE

The following are not part of the proposed solution:

- Payment gateway development
- ERP implementation
- Mobile application
- Customer-facing website
- Full inventory management
- Automated payment processing

M. EXPECTED OUTCOME

The proposed functionality should provide a centralized and consistent view of the retail order lifecycle.

The expected business outcome is:

**Better visibility → Faster identification of issues → Better operational decisions →
Reduced manual reporting effort**
