

USER ACCEPTANCE TEST CASES

Project: Retail Order Management & Refund Process Improvement

Document: User Acceptance Test Cases

Version: 1.0

A. PURPOSE

UAT verifies that the proposed solution meets the documented business requirements and can be used effectively by business users.

Testing focuses on the main order, return, refund, and reporting workflows.

B. UAT TEST CASES

ID	Test Scenario	Expected Result	Status
UAT-01	Search for a valid Order ID	Correct order details are displayed	Not Tested
UAT-02	Filter orders by status	Only matching orders are displayed	Not Tested
UAT-03	Filter orders by date	Records within the selected period are displayed	Not Tested
UAT-04	View shipment status	Correct shipment status is displayed	Not Tested
UAT-05	View a returned order	Return details are linked to the correct order	Not Tested
UAT-06	View pending refunds	Pending refunds are correctly identified	Not Tested
UAT-07	View refund amount	Correct refund amount is displayed	Not Tested
UAT-08	Check dashboard KPIs	KPI values match the underlying data	Not Tested
UAT-09	Apply dashboard filters	Relevant KPIs and charts update correctly	Not Tested

ID	Test Scenario	Expected Result	Status
UAT-10	Identify delayed transactions	Exceptions are clearly highlighted	Not Tested

C. DATA VALIDATION TESTS

ID	Test	Expected Result	Status
DV-01	Check duplicate Order IDs	No unintended duplicates exist	Not Tested
DV-02	Check missing required fields	Missing values are identified	Not Tested
DV-03	Check invalid refund amounts	Negative amounts are rejected or flagged	Not Tested
DV-04	Check date sequence	Invalid date relationships are identified	Not Tested
DV-05	Check order relationships	Returns and refunds reference valid orders	Not Tested

D. DASHBOARD TESTING

The following should be verified:

- KPI values match the source data.
- Filters work correctly.
- Charts respond to selected filters.
- Pending and delayed records are identifiable.
- Order, return, and refund figures remain consistent.

E. ACCEPTANCE STATUS

Each test case will be marked as:

Pass

Expected result is achieved.

Fail

Expected result is not achieved and requires correction.

Not Tested

Testing has not yet been performed.

F. UAT COMPLETION CRITERIA

UAT will be considered complete when:

- All critical test cases pass.
 - No unresolved high-priority defects remain.
 - KPI calculations are validated.
 - Dashboard filters work correctly.
 - Business users can complete the required scenarios successfully.
-

G. TESTING FLOW

Requirement → Test Case → Expected Result → Actual Result → Pass/Fail → Defect Resolution

This provides a direct connection between the documented requirements and the working solution.
