

Business Overview

Project Title: **Retail Order Management & Refund Process Improvement**

Company Overview

Nova Retail PVT LTD is a mid-sized retail company that sells consumer electronics through physical stores and an online platform across major Indian cities.

The company processes approximately 200,000 customer orders annually through its Operations, Warehouse, Customer Support, and Finance teams.

As the number of orders (volumes) increased, each department began maintaining separate spreadsheets and trackers to manage their own activities. While this approach worked initially, it created challenges in maintaining a consistent view of orders, returns, and refunds across departments.

Business Problem

The current order management process relies on multiple Excel trackers maintained independently by Operations, Customer Support, Warehouse, and Finance teams.

As a result:

- Order, return, and refund information is spread across multiple files.
- Managers spend significant time manually preparing operational reports.
- Delayed refunds and pending customer cases are difficult to monitor.
- Different departments often work with different versions of the same information.
- Identifying process bottlenecks requires manual analysis across several reports.

These issues reduce operational visibility and increase the effort required for daily reporting and follow-up activities.

Business Objective

Make a centralized reporting and tracking solution that provides a single centralized view of the complete order and its lifecycle, from order placement to refund completion.

The proposed solution should help business teams:

- Monitor order, return, and refund status from a single source.
 - Track operational KPIs.
 - Identify delayed orders and pending refunds.
 - Improve visibility into process bottlenecks.
 - Reduce manual effort involved in preparing operational reports.
-

Project Scope

- Order tracking
 - Return management
 - Refund tracking
 - Process analysis
 - Dashboard reporting
 - Operational performance monitoring
-

Stakeholders

Stakeholder	Responsibility
Customer Support	> Handle customer queries, returns and refund requests.
Operations Team	> Monitor order processing and KPIs.
Warehouse Team	> Process shipments and returned products.
Finance Team	> Review and process refunds.
Business Manager	> Reviews performance and operational reports.
Business Analyst	> Document requirements and designs the reporting solution.
